MANAGER'S COMMENTARY

August 2020 ended on a positive note with US equities registering new highs. US economic data continued to deliver positive surprises with PMI readings well ahead of forecast and the unemployment rate falling below 10%. The hot topic this month has been the shift in the Fed's "Longer-Run Goals and Monetary Policy Strategy" and its impact on inflation and the Fed's posture. The changes focus on promoting employment, running inflation hot for some time and also a change in inflation measurement. The key takeaway is likely to be an accommodative monetary policy for longer, although this may change once we are out of the Covid-19 episode. Our thoughts are covered in more detail in our latest investment update, available on our website. With US equities moving into an overbought position, there is a growing likelihood of a small correction. This is in line with the signals emanating from the volatility term structure and a confluence of events in the next 2 to 3 months. That said, with the Fed standing ready to provide further support to the economy, any such correction may be a profit taking exercise only and not a fundamental change in expectations. Geopolitical risks have increased as expected and may rise further to between now and the US Presidential Election. We expect South China Sea and China-India issues to gain some traction. We are cautiously risk-on with a close eye on the price action and momentum.
